Measurement: in accordance with JIS K 6249 Test pieces: 165°C/10 min (press cure), 200°C/4 h (post cure)

(Not specified values)

\*1 Standard addition quantity is the quantity of curing agent added to 100 parts compound.

\*2 Linear shrinkage values differ according to the curing agent used.

\*3 Angle piece

\*4 Measured values at 150°C/22 h.

\*5 The data below linear shrinkage is based on measurements on a product by compression molding at 170°C/10 min (with no post cure).

[Unit conversion] tensile strength: 10 kgf/cm<sup>2</sup> = 0.98 MPa; tear strength: 1 kgf/cm = 0.98 kN/m; volume resistivity: 10<sup>14</sup> Ω·cm = 1 TΩ·cm.

\*6 Data for the product in question was measured based on a pressure-cure product cured at 170°C/10 min (with no post cure).

## Fluorosilicone rubber

Fluorosilicone rubber is highly resistant to high and low temperatures and solvents, and has excellent workability. In IRM 903, a standard oil, there is less than 5% swelling (150°C/70 h). Fluorosilicone rubber also has excellent resistance to silicone fluid. Shin-Etsu's fluorosilicone rubber products include the FE-201-U Series for general molding (hardness: 25-80), and the FE-301-U Series of high strength rubbers (hardness: 40-80). We also produce FE-451-U, a copolymer

type that exhibits oil resistance midway between that of dimethyl silicone rubber and fluorosilicone rubber. This copolymer material has oil resistance while also having superior cold resistance, and maintains a greater degree of rubber elasticity at low temperatures than typical silicone rubbers.

Applications : Rubber parts including diaphragms, check valves, and connectors, specifically in applications requiring oil and solvent resistance.

Remarks		For fuel diaphragms and check valves			High tear strength		Copolymer

Measurement: based on JIS K 6249 Test pieces: 165°C/10 min (press cure), 200°C/4 h (post cure)

(Not specified values)

\*1 Measured values at 180°C/22 h \*2 FE-451-U is produced in response to orders received.

## SEP Rubber (silicone-modified EPDM)

SEP rubber is produced by modifying ethylene propylene rubber (EPDM) with silicone. This improves EPDM's properties of heat resistance and weather resistance, and low temperature characteristics. These performance characteristics lie between those of EPDM and silicone rubber, but SEP rubber has the additional favorable properties of chlorine resistance and sponge foaming characteristics. In high temperature conditions over 100°C, SEP rubber has higher mechanical strength, in particular tear strength, than EPDM, and is comparable to high-strength

silicone rubber. In terms of resistance to steam, hot water, acids and alkalis, SEP rubber is more durable than silicone rubbers. SEP rubbers are available in several grades: general grade (SEP-1711-U, SEP-1411-U), heat-resistant grade (SEP-1721-U, SEP-1421-U, SEP-855B-U), extrusion grade (SEP-1731-U), flame-resistant grade (SEP-363-U), and solar grade (SEP-1631-U).

Applications : Rubber parts for high-temperature applications requiring high strength, including plug boots and anode caps.

### General properties

Grade		SEP-1711-U*2	SEP-1721-U*3	SEP-1731-U	SEP-855B-U	SEP-363-U	SEP-1631-U
Appearance		Yellow	Light yellow	Gray	Light yellow	Black	Light yellow
Density 23°C g/cm <sup>3</sup>		1.11	1.15	1.21	1.15	1.40	1.02
Prescribed curing agent	Curing agent name	C-11	C-11	C-12/SEP-BM	C-11	C-11	C-11
	Standard addition quantity	2.0	2.0	4.0/0.2	2.0	1.5	2.0
Mooney viscosity ML 1+4 100°C		75	66	50	55	50	42

	Linear shrinkage %	2.5	2.7	—	—	—	—
Flame resistance	—	—	—	—	1.6mm UL94 V-0	—	
Remarks		For general molding Sulfur cure possible	For general molding Heat-resistant grade	For extrusion General grade	For general molding Heat-resistant grade	Flame resistant Halogen-free	Solar grade Extrusion possible

Measurement: based on JIS K 6249 Test pieces: 170°C/10 min (press cure), 150°C/2 h (post cure)

(Not specified values)

\*1 Measured values at 150°C/22 h \*2 SEP-1711-U is available in a hardness 40 variation, SEP-1411-U.

\*3 SEP-1721-U is available in a hardness 40 variation, SEP-1421-U. \*4 Angle

● We also offer a range of trial products in grades other than those listed above.

## Curing agents

Shin-Etsu’s silicone rubber compounds typically do not include a curing agent. These are called “U-types,” and expressed such as KE-951-U. With U-type products, choose a

suitable curing agent (from C-1A to C-25A/B) in accordance with the curing method. We also offer curing agents other than those listed here. Please contact Shin-Etsu for details.

### Types

	Applications	Appearance	Main vulcanizing ingredient
C-1A	General molding, thin sections	White paste	Benzoyl peroxide Approx. 50% content
C-3	General molding, steam curing, flame resistant	White putty	Dicumyl peroxide Approx. 20% content
C-4	General molding	Light gray paste	Ditertiary butyl peroxide Approx. 20% content
C-8 C-8A C-8B	General molding, thick sections	Light gray paste (C-8) Translucent paste (C-8A, C-8B)	2.5 dimethyl-2.5 bis (tertiarybutylperoxy) hexane Approx. 25% content (C-8), approx. 80% content (C-8A), approx. 40% content (C-8B)
C-10	Vulcanization of addition-cure high-strength rubbers	Brown paste	Contains metallic salt
C-15	General molding, for transparent products	Translucent paste	2.5 dimethyl-2.5 bis (tertiarybutylperoxy) hexane Approx. 12.5% content
C-16	General molding, for transparent products	Transparent liquid	Tertiarybutylcumylperoxide Approx. 50% content
C-23	Hot Air Vulcanization (HAV)	White paste	Paramethylbenzoilperoxide Approx. 50% content
C-25A/B	Vulcanization of addition-cure rubbers	Transparent paste (C-25A) Translucent paste (C-25B)	Contains metal complex (C-25A) Contains cross-linker (C-25B)

### Suitability by application

Grade	Application					Curing method			
	Thin sections	Thick sections	Sponge*	Carbon compound products	Low compression set	HAV	CV	Mold	Coating
C-1A	●		●				●	●	●
C-3		●	●	●	●		●	●	
C-4		●			●			●	
C-8 C-8A C-8B	●	●		●	●		●	●	
C-10		●	●	●	●	●		●	
C-15	●	●		●	●			●	
C-16	●	●			●		●	●	
C-23			●			●	●	●	●
C-25A/B		●	●	●	●	●		●	

\* Use sponge curing agents as a combination of C-1A with C-3, or C-23 with C-3.

Standard addition quantity is the quantity of curing agent added to 100 parts compound.

★ Note: Please contact Shin-Etsu separately for information regarding Hot Air Vulcanization (HAV).

\*1 In summer (June-September), add curing agents at 0.2-0.4 parts greater than the standard addition quantity;  
in winter (December-March), add at 0.1-0.3 parts less than the standard addition quantity.

\*2 C-4 is volatile, so the rubber compound should be used soon after mixing.

\*3 C-8 has qualities nearly identical to C-4, but has the advantage of lower volatility than C-4.

## Standard conditions for compression molding

Grade	Thickness of molded item (mm)		Less than 1	1 - 5	5 - 10	10 - 25	25 - 50
	Press conditions						
C-1A*1 C-23	Temperature	°C	120 - 125				
	Time	min	10	10 - 15	15 - 30	30 - 60	60 - 120
	Pressure	MPa	2.9 - 4.9				
C-3	Temperature	°C	155 - 160				
	Time	min	10	10 - 15	15 - 30	30 - 60	60 - 120
	Pressure	MPa	2.9 - 4.9				
C-4 C-15 C-8 C-16 C-8A C-8B	Temperature	°C	165 - 170				
	Time	min	10	10 - 15	15 - 30	30 - 60	60 - 120
	Pressure	MPa	2.9 - 5.9				
C-10 C-25A/B*2	Temperature	°C	150 - 170				
	Time	min	10 - 20			20 - 60	60 - 120
	Pressure	MPa	2.9 - 5.9				

\*1 Curing may be uneven in molded items thicker than 5 mm. Shin-Etsu recommends C-3, C-8, or C-8A for molding items over 5 mm thick.

\*2 Molding possible at temperatures as low as 120°C-150°C.

## Primers

By applying the primer in advance, better adhesion will be obtained.

Grade	Features	Appearance	Ingredient (%)	Solvent	Drying conditions	Adherend
Primers No.4	For general molding	Colorless and transparent	20	n-Heptane	23°C / 15 - 20 min	Metal Plastic
Primers No.18B	Heat and oil resistant	Reddish brown	25	Toluene n-Hexane	23°C / 15 - 20 min →100 - 150°C / 10 - 20 min	Metal

● We offer other primers in addition to those listed above. Contact our Sales Department for details.

## Coloring agents

Grade	Color	Coloring ingredient (%) (ingredient name)
KE-Color BR	Reddish brown	50 (iron oxide)
KE-Color W	White	50 (titanium oxide)
KE-Color MB	Blue	50 (lapis)
KE-Color BL	Black	50 (iron oxide, carbon)
KE-Color SB	Sky blue	50 (cobalt blue)
X-93-941	Yellow	50 (titanium oxide, organic pigment)
X-93-942	Red	50 (organic pigment)

## Application examples by industry

Industry	Application examples	Desired properties	Typical grade
Home appliances	anode caps, wedges	electrical insulation, heat resistance, flame resistance	KE-5612G-U
	defrosters	heat resistance, cold resistance, electrical insulation	KE-552B-U/KE-136Y-U KE-582-U
	hot airbrushes	heat resistance, weather resistance, color tone	KE-941-U/KE-951-U
	microwave oven window gaskets microwave oven turnbelts	heat resistance, low compression set	KE-951-U
Electric wiring	lead wires of motors and electric appliances heater wires of rice cookers defroster wires of refrigerators ignition wires	electrical insulation, heat resistance, cold resistance, thermal conductivity, extrusion workability, flame resistance, high pressure-resistance	KE-552B-U KE-5620W-U
Office equipment	keypads of mobile communications devices, etc.	electrical conductivity (some)*1, electrical insulation, flex fatigue resistance, low temperature-dependence	KE-951-U KE-3711-U
	EMI gaskets	electrical conductivity, flame resistance, thermal conductivity	KE-3801M-U/KE-3711-U
	photocopy machine (PPC) rollers	heat resistance, releasability, low compression set	KE-870-U
	FAX platen rollers		KE-7008-U
	printer platen rollers		KE-971-U
